The New Professional Hygienic Headsets for Exhibitions

Headsets are a crucial part of any multimedia-rich and immersive exhibition experience. They are the tool through which the experience is communicated to the visitor. Therefore, the quality and adaptability of headsets are of essential importance!

Exhibitions are professional and demanding environments where the number of visitors and the usage frequency are high. Headsets must therefore be always available and ready for use. Comfort and sound quality are obvious requirements. And during this pandemic period, hygiene has become an equally, if not more, important issue for both museums and visitors.

The Twist professional headsets are comfortable with high audio quality, and are hygienic because they do not touch the ears. Designed and developed by Look2Innovate, the Twist is the result of years of research and testing by an expert team of designers and engineers, and based on decades of experience in the museum and exhibition industry. The Twist is therefore created for easy distribution, robustness, and high sound quality, while reassuring the visitors' hygienic concerns. The Twist responds to these essential requirements for a successful exhibition!

Additionally and as an option, the Twist headsets can be provided with adaptors to extend the speakers for direct placement on the ears. These might be required for exhibitions requiring immersive high-quality stereo sounds, and museums can provide sanitising wipes to address hygiene issues.

The Twist headset series offers three distinctive models that have in common a main body structure and sound quality, with differing functionalities, as follows:

The Twist

Hygienic headsets

The Twist-BT

Wireless hygienic headsets.

The Twist-Guide

A standalone interactive multimedia audioguide

Reliability:

Designed for 24/7 operation.
Fully solid state with no moving parts.

Warranty:
